

Instructional Videos

Available for purchase \$39 each

There Is A Time to Buy - Would you like to learn how, why and when to buy stocks that are most likely to go up in the next six to twelve months? This CD teaches just that through the use of Value Line, Toolkit, the Yahoo web site, and Navellier's Portfolio Grader. You will also learn how to place a limit order, how to compare a stock's performance to the SP500 and how to follow your portfolio on Yahoo.

Price Chart Reading – Learn how to read price charts and use technical indicators that work best for the long term fundamental investor. Moving averages, support and resistance, trend lines, MACD, moving average convergence divergence, RSI, relative strength index, and entry and exit points can be used to your advantage.

Selling Covered Calls - Can increase your portfolio return. The CD starts with the basics, covers the language of options and then actually gets you started trading covered calls. All of the details are included, including the Greeks. Learn when to sell covered calls, at what premium, strike and expiration date for the best return on stocks you currently own.

Selling Cash Secured Puts – Is a strategy where you can buy stocks you would like to own but at a discount. Sounds almost too good to be true, but it gets even better. The buyer will pay you a premium for that right and that money is yours to keep regardless of what happens to the option. You will learn the basics, steps to get started and see actual examples of options traded. Selling Covered Calls and Selling Cash Secured Puts work well together.
