Narrow-Moat Monster Poised to Expand Volume With Innovation Pipeline and Coca-Cola Alliance

Business Strategy & Outlook Dan Su, CFA, Equity Analyst, 26 Nov 2023

Although not the pioneer in energy drinks, Monster has earned its perch in this attractive category through innovations that resonate with consumers and effective marketing that keeps its core brand top of mind. The long-term strategic alliance with wide-moat Coca-Cola, effective since 2015, further advances Monster's competitive standing, affording the firm impressive distribution breath and product availability that is hard to match by rivals. As such, we award a narrow economic moat rating for Monster.

We see Monster as remaining well positioned to capitalize on favorable energy drink demand in the coming years, thanks to a sharpened focus on user activation and retention by expanding consumption occasions and adding better-for-you options, including zero sugar versions of its classic recipes and plant-based drinks. In addition, we expect Monster's efforts to reach more untapped consumers in vast emerging markets across Latin America and Eastern Europe to receive stronger support from the Coke system, now that Coca-Cola has scrapped its own energy offerings following a lackluster response. Monster has a two-pronged strategy in place, maintaining a premium positioning for the core Monster trademark in the modern retail and convenience channels, while rolling out Predator and Fury brands at more affordable price points to tap consumers not as well-heeled as the traditional Monster demographic. We believe the Coke system's close ties with the traditional trade will be particularly

Business Description

Monster Beverage is a leader in the energy drink subsegment of the nonalcoholic beverage market, generating two thirds of revenue in the U.S. and Canada. The well-known Monster trademark includes brands such as Monster Energy, Monster Ultra, Java Monster, and Juice Monster. The firm also owns other energy drink brands, such as Reign, NOS, Burn, and Mother, and brews and distributes beers and flavored malt beverages following the acquisition of a craft brewer in 2022. Monster controls branding and innovation but outsources beverage manufacturing and packaging to copackers and finished goods distribution to bottlers in the global Coca-Cola system (pursuant to a 20-year agreement inked in 2015). Coke is the largest shareholder of Monster with a 19.5% stake.

helpful to this affordability endeavor.

Despite our sanguine view, Monster's growth outlook is not without risks. Regulatory scrutiny and administrative restrictions on caffeine content and marketing constraints remain a threat to Monster's brand image and volume demand in North America and Western Europe. Competition ferocity is on the rise as well, as beverage giant wide-moat PepsiCo brings strong tier-two energy brands onto its own distribution network, while various emerging brands target energy drinkers that look for new fares. That said, we believe Monster is poised to continue thriving thanks to an advantaged competitive position and management's strong execution.

Bulls Say Dan Su, CFA, Equity Analyst, 26 Nov 2023

- ▶ Strong energy drink demand, coupled with Monster's strong innovation pipeline, bodes well for high-single-digit top-line growth in the coming years.
- ▶ Monster has broadened its appeal to health-conscious consumers with better-for-you drinks, including zero sugar, zero calorie offerings and beverages containing only natural ingredients.
- ▶ Monster stands to gain volume share as the maker of rival brand Bang (with high-single-digit volume share in the U.S.) filed for bankruptcy in 2022.

Bears Say Dan Su, CFA, Equity Analyst, 26 Nov 2023

- ▶ Regulatory scrutiny and administrative restrictions in the U.S. and Europe will likely persist and erode Monster's brand intangibles and retail demand.
- ▶ PepsiCo has stepped up investments in its own energy drink portfolio, posing threats to Monster's dominance in North America.
- ▶ The firm faces an uphill battle to advance its low-single-digit volume share in Asia-Pacific (35% of global energy drink demand) given stiff competition from Red Bull's sister company T.C. Pharmaceutical and other well-established local brands.

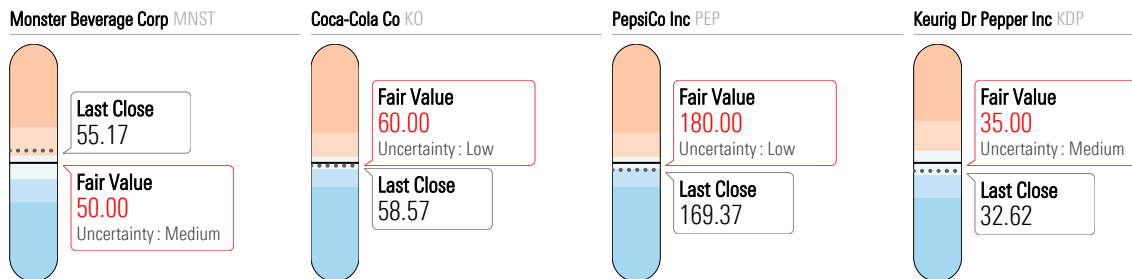

Economic Moat Dan Su, CFA, Equity Analyst, 26 Nov 2023

We believe Monster Beverage has carved out a narrow economic moat, thanks to strong brand affinity in the energy drink category and extensive distribution reach through a long-term partnership with the Coca-Cola system globally. The brand intangible-driven moat has helped the firm deliver returns on invested capital (including goodwill) that exceeded our estimate of its 7.5% weighted average cost of capital over the past 10 years, and we project excess investment returns to continue over the next decade. That said, Monster's narrow focus on energy drinks (which represent a low-single-digit percentage of overall soft drink volume), regulatory headwinds, and uncertainties surrounding the ultimate renewal of the Coke distribution agreement in 12 years, combine to constrain our confidence in the firm's ability to deliver excess returns for more than 20 years. We therefore cap our rating at a narrow moat.

Monster's intangible asset-driven moat is premised on the brand equity associated with its namesake Monster trademark. Although launched 15 years behind energy drink pioneer Red Bull, the Monster brand has amassed leading volume share globally (18% versus 14% for Austria-based Red Bull GmbH, according to Euromonitor). And in its core North America market, where Monster generates two thirds of its revenue, the brand holds a whopping 46% volume share, far outpacing Red Bull at just 25%. We attribute this to Monster's constant stream of innovation that resonates with consumers and a series of high-profile sports sponsorships, including Nascar and MotoGP World Championship, that serve to keep its brand top of mind with consumers.

We see structural factors in the \$78 billion global energy drink category that are conducive to Monster's brand equity. Favorable volume trends (averaging 6% in the U.S. over the past decade, versus 2% in the overall soft drink sphere) fueled by demand from busy consumers looking for a quick and convenient energy boost have enabled top brands like Monster to increase sales and brand awareness with more productive spending in advertising and marketing. Based on our calculation, each incremental dollar that Monster spent on advertising and marketing drove \$13.10 in increased revenue on average over

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

the past five years, ahead of its larger nonalcoholic beverage peers Coca-Cola (\$12.00), PepsiCo (\$11.40), and Keurig Dr Pepper (\$10.20). Moreover, brand differentiation is largely based on perceived functional benefits (such as mental alertness and improved energy level) and to a lesser extent flavor profiles, which underpin consumer loyalty and repeat purchase frequency, thus private-label penetration is low in energy drinks, at low single digits versus the midteens or low-20s common in the domestic consumer goods sphere. As a result, Monster has been able to grow volumes at midteens rates annually over the past five years while keeping prices flat. Even though the firm does not publish retail-level product pricing information to facilitate an analysis of pricing trends, we'd point to Monster's high gross margins (averaging 57% over the past five years, comparable with Coca-Cola at 60.1% and PepsiCo at 54.2%), as a strong indication of consumers' willingness to pay a premium.

We also view Monster's success over the years in adding new product lines and pricing ladders under the Monster banner as evidence of its brand prowess in engaging and maintaining its loyal customer base. Ten product lines have been added to the Monster franchise over the past 20 years, including Monster Super Fuel (containing magnesium and electrolytes for workout enthusiasts), bubbly Juice Monster with various fruit flavors, non-carbonated tea-flavored Monster Rehab, and coffee-infused dairy-based Java Monster. We believe these line extensions have expanded consumption occasions and created more buzz for the existing consumer community while broadening the palate appeal to convert new customers to the trademark in the U.S. and internationally.

In addition to the Monster trademark, we see the firm's distribution agreement with Coke as the second pillar to our economic moat rating. Effective since 2015, the initial 20-year partnership has essentially made Monster the exclusive energy play in the Coke system, giving Monster invaluable access to Coke's extensive distribution footprint in the U.S. and internationally, while enabling Coke to benefit from Monster's strong volume growth in terms of distribution density to help offset stagnating trends in Coke's core soda business. The tie-up has accelerated Monster's share gains, enabling the firm to further distance itself from Red Bull in North America and to narrow the gap materially in Western Europe. According to Euromonitor, Monster's global volume share received an immediate lift following the agreement, expanding to 17% in 2016 (compared with 13% in 2014), and continued to tick up steadily in the following years to reach 18% by 2022. In comparison, Red Bull GmbH's volume share has stagnated at around 14% over the past decade, which we attribute to conservative product and marketing strategies from the family-owned business. Although Coke launched energy drinks under its own Coke trademark in 2020 in an attempt to go it alone, the product line was discontinued within 18 months due to weak performance. We believe Coke's short-lived endeavor has reaffirmed the strength of the Monster franchise, and we expect the Coke system to reinforce its commitment to the leading energy drink brand.

Aided by the Coke system, the Monster products are now sold in over 140 countries and territories

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

around the world, affording brand recognition and product accessibility that is hard to match by its energy drink peers. Over the next 10 years, we think the Coke relationship should deliver more volume upside, particularly in emerging markets such as Latin America, where energy drink consumption volume remains low (at 8% of global volume, versus a 14% share in the overall soft drink aisle). These growth initiatives, which dovetail well with Coke's strategic priorities of tapping consumption upgrade tailwinds in these regions, should drive another leg of volume growth for Monster, supporting our mid-single-digit volume projection for the firm (ahead of the low-single-digit rate we forecast for the overall nonalcoholic beverages).

As energy drinks remain a niche in the broader soft drink space (low-single-digit volume share), we don't think Monster benefits from a cost advantage given its negligible scale relative to beverage behemoths such as wide-moats Coke and PepsiCo. Monster has little bargaining power in sourcing ingredients (sweeteners, vitamins, and flavors) or packaging materials (aluminum, PET, and paper cartons) given the substantial overlap with the purchasing baskets of much larger beverage peers. Also, with packaging and distribution outsourced to third-party copackers, bottlers, and distributors, Monster has little wiggle room in negotiating reduced per unit costs. Moreover, its advertising and marketing budget of approximately \$460 million in 2022 (7% of sales) is a fraction of the \$4.3 billion at Coke (10%) and \$5.2 billion at PepsiCo (6%), putting the firm at a disadvantage in bidding for sports and music event sponsorships or securing a popular time slot in broadcast media campaigns.

While we see strong evidence of brand intangibles and extensive distribution via the Coke partnership that underpin a durable competitive position, our confidence in Monster's ability to deliver excess investment returns for over 20 years is constrained by the firm's narrow focus on the energy drink category, ongoing regulatory scrutiny, and potential restrictive measures for energy drink makers (such as reduced caffeine content, marketing venue restrictions, or even minimum age requirements for purchase). Furthermore, the Coke distribution agreement is up for renewal in 12 years (2035), which introduces further uncertainties around the continuity of the partnership and the economic terms. As such, we view a narrow economic moat as appropriate for Monster.

Fair Value and Profit Drivers Dan Su, CFA, Equity Analyst, 26 Nov 2023

We are raising our fair value estimate for Monster Beverage to \$50 per share (from \$48), due to better-than-expected third-quarter results and time value. The beverage maker grew sales by 14% (on an 11% volume expansion accelerating from the 8% pace in the first half) and EPS by 43% in the September quarter, outpacing our estimates of 13% and 25% increases, respectively, and we nudged up our estimates for 2023 accordingly. Our revised fair value estimate implies a 31 times multiple against our adjusted 2024 earnings estimate and a 2024 enterprise value/adjusted EBITDA multiple of 22 times, which, while lofty, aligns with its historical five-year averages of 35 times and 25 times, respectively.

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

Our 8% revenue CAGR forecast over the next 10 years is driven by our expectation for steady increases in energy drink volume expansion (at a mid-single-digit rate each year) and in pricing (2%-3% annually), which are consistent with trends forecast by Euromonitor. We expect the core Monster trademark (90% of sales) will remain the key revenue growth driver, with incremental revenue from new product launches including more better-for-you offerings. Further, we expect the newly acquired craft beer brands, together with the malt beverage offerings in the pipeline to ramp up sales at double-digit rates in the next few years once integration is complete, although from a very small revenue base. Given a lack of brand intangibles and stiff competition in the unfamiliar alcoholic beverage sphere for Monster, we expect this new category to make up only a low-single-digit percentage of sales by 2032.

On the profitability front, we have modeled operating margins to expand by 910 basis points to 34.2% at the end of our 10-year forecast period, relative to 2022. It's worth noting that margins were depressed the past three years due to temporary factors, including pandemic-driven supply chain disruptions that drove significantly higher costs in co-packing and imported aluminum cans. Against this backdrop, we believe a more suitable base of comparison would be year 2019, when Monster posed a 33.4% operating margin, or 80 basis points shy of our terminal-year projection. For the forecast period, we have modeled 130 basis points of gross margin contraction (against 2019), mainly due to lower margins anticipated for Monster's affordability initiatives in 2023 and onward to tap additional demand in emerging markets with the launch of the lower-priced Predator and Fury brands. In addition, we expect the newly acquired alcoholic beverage business to carry lower gross margins (compared with the energy drink unit) given a lack of brand intangibles and small scale. We expect contraction on the gross margin line to be more than offset by effective leverage of advertising spending (8.0% of sales by 2032 versus 9.3% in 2019) and enhanced efficiency in its labor and distribution expenses (16.5% of sales by 2032 versus 17.2% in 2019).

Risk and Uncertainty Dan Su, CFA, Equity Analyst, 26 Nov 2023

We assign a Medium Uncertainty Rating to Monster Beverage. The company is exposed to regulatory scrutiny and administrative restrictions that may erode the brand perception and retail demand. A narrow focus on energy drinks further exposes the firm to material and sudden demand shifts away from this category. Monster also faces competitive threats in the energy drink sphere led by PepsiCo and in the malt beverage category where Monster has weak brand perception and distributor relationships.

Outsourced manufacturing and distribution make Monster vulnerable to disruptions in third-party co-packing and distribution capacity that could result in production delays and inflated costs. While distribution risks are likely under control due to its alliance with the Coke system and the latter's distribution scale, it will remain a challenge for the firm to secure reliable third-party co-packers in emerging markets where the firm looks to ramp up volume.

Monster Beverage Corp MNST ★★

26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment ¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

On sourcing, Monster's recent entry into craft beer brewing may subject it to low availability of rare hops (for premium beers) that affects the brewing schedule and output. In addition, we expect the firm to constantly contend with tight aluminum can supply as more beverage makers adapt to increasing preference for this packaging among environmentally conscious consumers.

The highly visible Monster trademark is constantly under the scrutiny of consumers given the ubiquity of mobile phones and social media. Any brand messaging, consumer experience, social, or sustainability practice that is perceived to be inconsistent with the company's positioning could be brought into the limelight. Without a timely and appropriate response, brand damage and a hit to volume demand and pricing power could ensue. That said, we don't expect environmental, social, and governance risks will materially affect Monster's operational results and investment returns long term.

Capital Allocation Dan Su, CFA, Equity Analyst, 26 Nov 2023

We assign a Standard capital allocation rating to Monster, based on our view that the company has a strong balance sheet, a fair track record of investments for long-term value creation, and an appropriate shareholder distribution practice with stock buybacks.

First, we view Monster as in solid financial health. Its balance sheet is strong, with no long-term debt and \$3 billion in cash and short-term investments as of September 2023. This, coupled with steady free cash flow to equity over the next 10 years (averaging 25% of sales), gives us confidence that the company is positioned well to withstand macro volatilities and to invest for long-term growth.

On the investment front, capital outlays for organic growth have been the priority, with the firm spending an average of 8% of sales on marketing and advertising over the past five years, though just 2% on capital expenditure as the firm outsources the bulk of manufacturing and distribution. We expect the firm to maintain investments in advertising at similar levels over the next 10 years, while ticking up spending in capacity to 2.5% of sales due to investments in brewing and warehousing capabilities for the newly acquired malt beverage business. We believe these investments are crucial to maintaining the firm's long-term competitive position and supporting revenue growth.

Monster only made two sizable acquisitions over the past 10 years, namely the \$690 million purchase of major flavor supplier American Fruits & Flavors (AFF) in 2016 and the \$330 million deal buying California-based craft brewer CANarchy in 2022. Given that AFF contributes under 1% of operating profits to Monster, we believe the transaction is most likely a strategic one to lock in high-quality fruit ingredients and flavors that help differentiate Monster from peers. Regarding the CANarchy acquisition in 2022, we think the firm is prudently diversifying into the alcoholic beverage category for new avenues of growth and, if successful, should alleviate investor concern about Monster's narrow focus on energy drinks. That said, given Monster's lack of well-known malt beverage brands and stiff competition led by entrenched players, including Constellation, AB InBev, and Boston Beer, Monster will need to invest

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment ¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

heavily in marketing and distributor relationship building for several years at least before generating tangible benefits from the acquisition. For now, it's too early to assess whether the deal can add to the firm's overall investment returns.

We believe the swap of Monster's nonenergy assets for Coke's seven-brand energy drink portfolio in 2015 (as part of the long-term partnership agreement) was an important transaction as well, which helped to cement Monster's status as the exclusive energy play in the Coke system and eliminated potential conflicts of interests between the two partners. However, the price tag for the Coke assets was undisclosed, making it impossible for us to quantify investment returns from this deal.

On shareholder distributions, Monster has not paid any cash dividends since inception and has no such plans in the foreseeable future. However, the company did return more than \$5 billion in cash to shareholders since 2012 via share buybacks. As of March 2023, repurchase plans authorized by the board had a remaining balance of \$680 million. We expect the firm to continue with share buybacks in the coming years, though we stick to our view that buybacks create value for shareholders only when executed at market prices below our assessment of intrinsic value, and it's not necessary to commit to a fixed target amount.

Analyst Notes Archive

Monster Beverage Earnings: Strong Volume on Innovation and Marketing, Pricing Discipline Upheld

Dan Su, CFA, Equity Analyst, 3 Nov 2023

Narrow-moat Monster Beverage posted accelerating volume and better-than-expected profit growth in the third quarter, reinforcing our confidence in its long-term prospects underpinned by brand intangibles and the strategic partnership with wide-moat Coca-Cola. Sales grew 14% (on an 11% volume expansion, accelerating from 8% in the first half) and EPS rose 43%, outpacing our estimates for 13% and 25% increases, respectively. We plan to tick up our 2023 forecasts, but our 10-year projections for high-single-digit annual sales growth and operating margin averaging 32% remain in place. As such, our \$48 fair value estimate will likely rise by a low-single-digit percentage. We view the shares as fairly valued.

Net sales for the Monster Energy drinks segment (90% of sales) grew 15% on a constant-currency basis, with low-teens volume expansion showcasing the firm's ability to retain and expand its consumer base through product innovation (zero-sugar recipes, new fruit flavors, and slim packaging), effective digital marketing that resonates with consumers, and expanding distribution in Europe and Asia, including China, where Monster currently holds a low-single-digit volume share. We see volume upside from the Bang acquisition, which closed in July and should expand Monster's exposure to the lifestyle segment of the energy drink market as well as help fend off competition from new entrants including Celsius and C4. However, we expect the volume contribution to be small in the coming quarters as distribution

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment ¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

migrates to the Coke system. We think management is prudent to limit price hikes to 2%-3%, consistent with historical levels, which should help preserve its value proposition amid consumer belt-tightening. Operating margin expanded 180 basis points to 27.5%, thanks to easing freight and aluminum cost inflation and efficiency initiatives, and we think the firm remains on track to bring margins back to the low 30s over the next three years.

Monster Beverage Earnings: Innovation and Value Brands Fuel Top Line; Volume Upside From Bang Deal Dan Su, CFA, Equity Analyst, 4 Aug 2023

We plan to maintain our \$48 fair value estimate for narrow-moat Monster Beverage after absorbing second-quarter results that matched our estimates. Sales grew 12% (or 14% on a currency-neutral basis) and EPS rose 50%, keeping the firm on track to meet our 2023 targets for sales and EPS to grow 13% and 31%, respectively. We see no reason to alter our 10-year projections for high-single-digit annual sales growth and operating margin averaging 32%. Despite our constructive view of Monster's long-term prospects, anchored by brand intangibles and the long-term partnership with wide-moat Coca-Cola, we see the shares as expensive, trading at a 17% premium to our intrinsic valuation.

Monster's core energy drink segment (91% of sales) grew 12% on a currency-neutral basis, outpacing the energy drink market's 10% growth per management. We attribute this to innovation, such as Monster Zero Sugar and Java Monster Triple Shot Mocha and Vanilla, as well as expanded distribution in Europe and Asia-Pacific. We find the 26% sales growth in the strategic brands segment (5% of sales) encouraging and believe it was primarily driven by affordability brands (Predator and Fury) as the firm targets emerging-market consumers across Latin America, the Middle East, and Southeast Asia with lower price points and through the traditional trade.

Additionally, the firm confirmed the July acquisition of energy drink rival Vital Pharmaceuticals, owner of the Bang Energy brand, which has a mid-single-digit volume share in the United States. We view the deal favorably, given Bang's brand standing in performance energy drinks, accessibility upside from transitioning to Coke's distribution, and reasonable valuation with a purchase price at roughly 1 times sales. We plan to assess the deal's impact on Monster's valuation when more operational details become available in the November earnings release.

Monster Beverage: Favorable Demand Trends and Coke Partnership to Fuel Growth; Shares Expensive Dan Su, CFA, Equity Analyst, 25 May 2023

We are raising our fair value estimate for Monster Beverage to \$48 (from \$43), which implies a 2024 enterprise value to adjusted EBITDA multiple of 22 times. The increase is driven by higher interest income estimates over the next 10 years (2% return on cash, versus 0.1% in the prior model) alongside faster growth (7%, versus 4% previously) in earnings before interest (excluding tax) in the five years following the 10-year explicit forecast period, as we anticipate more robust volume expansion.

Monster Beverage Corp MNST ★★

26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment ¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

Our 10-year sales growth and operating margin projections remain unchanged. We anticipate Monster to grow volume in line with the energy drink category (at a mid-single-digit rate annually) in addition to 2%-3% pricing, resulting in 8% top-line expansion each year. In addition, we have modeled operating margins to expand by 80 basis points (relative to 2019 levels) to 34.2% by 2032 and view 2019 as a more suitable base of comparison to exclude temporary, pandemic-induced factors. Specifically, we project lower margins in the newly acquired craft brewer business and associated with Monster's affordability initiatives to drive a 130-basis-point gross margin contraction to 58.7% in 2032. However, this will be more than offset by efficiency gains in advertising spending (8.0% of sales by 2032, versus 9.3% in 2019) and in labor and distribution expenses (16.5% of sales, versus 17.2%)

We believe Monster Beverage has carved out a narrow economic moat around its category-leading energy drink portfolio, thanks to brand-driven intangible assets and expansive distribution breadth backed by a long-term distribution alliance with wide-moat Coca-Cola.

Despite this, we continue to view Monster Beverage's shares as richly valued, trading at a 24% premium to our intrinsic valuation. Given uncertainties associated with regulatory headwinds for energy drinks and Monster's narrow focus in the category, we'd wait for a more attractive entry point before building a position in this name.

Monster Beverage Earnings: Pricing Power Seems Intact as Firm Benefits From Hikes; Shares Not Cheap

Zain Akbari, CFA, Equity Analyst, 4 May 2023

Our \$43 per share valuation of narrow-moat Monster Beverage should rise by a mid-single-digit percentage, largely reflecting the time value of money after the company posted first-quarter earnings that suggest it is on pace to meet our full-year targets. The company saw sales and profitability improve in the wake of recent pricing actions taken to cover rising costs with little impact to market share, a dynamic that suggests the pricing power underlying our moat rating is intact. Despite our favorable view of the company's competitive position, we believe the shares are priced such that they assume perfect execution (particularly challenging considering that Monster is increasingly dependent on less established markets and product lines for growth).

Monster's first-quarter sales rose 12%, spurred by 11% expansion in the core energy drinks segment. The top-line growth and normalizing freight rates contributed to the firm's roughly 230 basis points of operating margin expansion (to 28.6%), and we expect the situation to improve further as the company works down its inventory of aluminum cans acquired from suboptimal locations at the height of supply chain challenges in 2021-22. Our full-year targets should not change significantly, calling for 12% top-line growth and around 330 basis points of adjusted operating margin expansion (to a little more than 28%).

Although management indicated that the category has softened somewhat as economic uncertainty has

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment¹
55.17 USD 24 Nov 2023	50.00 USD 26 Nov 2023 22:30, UTC	1.10	57.40 USD Bil 24 Nov 2023	 Narrow	 Large Growth	Medium	Standard	 1 Nov 2023 05:00, UTC

risen, we believe Monster should benefit from its diverse portfolio and burgeoning international scale in the event of a downturn. The energy drink category benefits from a functional orientation and low private-label penetration, and we believe Monster's standing as a top-two brand in major markets bodes well. We continue to expect adjusted returns on invested capital to rebound into the mid-30s on average over the next five years, from 28% in 2022.

Monster Beverage's Ongoing Brand Resonance on Display in Q4, but Shares Expensive Erin Lash, CFA, Sector Director, 1 Mar 2023

We don't expect a material change in our \$85 fair value estimate for narrow-moat Monster Beverage after incorporating weaker-than-expected fourth-quarter results. We continue to view Monster's shares as overvalued, trading at a 15% premium even after a 4% drop in post-market trading.

Monster's fiscal 2022 sales totaled \$6.31 billion (up 13.9%, including \$239.5 million of unfavorable foreign currency movement) and its EPS was \$2.23, both a tad below our \$6.4 billion and \$2.26 respective forecasts. Nonetheless, we are encouraged to see healthy consolidated unit growth for the year (14.4%) considering the 6% price increase (implemented on Sept. 1) in the U.S., where Monster generates most of its sales.

Encouragingly, Monster announced plans to bring additional innovation (including a malt beverage alcohol, unflavored water, and wellness energy drinks) to market through the incremental shelf space it has secured across different channels. From our vantage point, this highlights Monster's strong brand strength and the valued position it has built with shoppers and retail partners (basis of our narrow moat rating). However, we aren't blind to the effect of the confluence of cost inflation (across its key ingredients, inputs, and co-packaging) and supply chain challenges (while moderately improving) on the business. In this context, Monster's full-year operating margin deteriorated by 730 basis points to 25.1%. Still, we expect cost pressures to subside gradually as the environment normalizes, and Monster depletes higher-cost imported can inventories in the coming quarters. We maintain our long-term forecast of high-single-digit average top-line growth and 34%-35% operating margins.

Price Increases Starting To Prop Up Monster's Margins; Long-Term Outlook Remains Intact Zain Akbari, CFA, Equity Analyst, 4 Nov 2022

Our \$83 per-share valuation of narrow-moat Monster Beverage should not change materially in response to its third-quarter earnings announcement, which included 15% sales growth. The company continues to face cost challenges with respect to ingredients and aluminum cans, but recent price increases are improving the margin picture. We see inflationary pressure as transitory, and still expect mid- to high-single-digit percentage annual sales growth and low- to mid-30s operating margins in the long term. We suggest investors seek a more attractive entry point.

Monster Beverage Corp MNST ★★ 26 Nov 2023 22:35, UTC

Last Price	Fair Value Estimate	Price/FVE	Market Cap	Economic Moat™	Equity Style Box	Uncertainty	Capital Allocation	ESG Risk Rating Assessment¹
55.17 USD <small>24 Nov 2023</small>	50.00 USD <small>26 Nov 2023 22:30, UTC</small>	1.10	57.40 USD Bil <small>24 Nov 2023</small>	 Narrow	 Large Growth	Medium	Standard	 <small>1 Nov 2023 05:00, UTC</small>

Through the first nine months of the year, Monster’s sales were up 16.6%, with a 24.8% operating margin (down from 33.6% for the same period in 2021 amid higher costs, particularly for raw materials, packaging, and transportation). Our 16.9% 2022 top-line growth forecast is in line with results to date, and we expect profitability to improve as Monster laps the late 2021 inflationary surge with the benefit of pricing increases already implemented, and as management indicates supply challenges are easing (although it notes it is still using costly air freight to ensure timely ingredient supplies in certain markets). Furthermore, the company is drawing down its stock of higher-cost imported cans (purchased in order to minimize shipping disruptions), which should also benefit margins. We still expect profitability to rebound in 2023, with operating margins nearing 30% from what should be a mid-20s mark in 2022.

Demand remains strong (led by core energy-drink offerings) despite Monster’s price increases, high fuel prices, and other inflationary strains and economic uncertainty. Case sales are up 16% year to date, suggesting that consumers remain committed to the brand and category despite prices that most recently increased at a mid-single-digit clip in the United States during mid-2022. This suggests low- to mid-50s long-term gross margins remain well within reach, up from just below 50% year to date. **MI**

ESG Risk Rating Breakdown

Exposure

Company Exposure ¹	44.6	
– Manageable Risk	40.0	
Unmanageable Risk²	4.6	

Management

Manageable Risk	40.0	
– Managed Risk ³	12.2	
Management Gap⁴	27.9	

Overall Unmanaged Risk 32.4

- ▶ Exposure represents a company's vulnerability to ESG risks driven by their business model
- ▶ Exposure is assessed at the Subindustry level and then specified at the company level
- ▶ Scoring ranges from 0-55+ with categories of low, medium, and high-risk exposure
- ▶ Management measures a company's ability to manage ESG risks through its commitments and actions
- ▶ Management assesses a company's efficiency on ESG programs, practices, and policies
- ▶ Management score ranges from 0-100% showing how much manageable risk a company is managing

ESG Risk Rating

ESG Risk Ratings measure the degree to which a company's value is impacted by environmental, social, and governance risks, by evaluating the company's ability to manage the ESG risks it faces.

1. A company's Exposure to material ESG issues 2. Unmanageable Risk refers to risks that are inherent to a particular business model that cannot be managed by programs or initiatives 3. Managed Risk = Manageable Risk multiplied by a Management score of 30.4% 4. Management Gap assesses risks that are not managed, but are considered manageable 5. ESG Risk Rating Assessment = Overall Unmanaged Risk = Management Gap plus Unmanageable Risk

ESG Risk Rating Assessment⁵

ESG Risk Rating is of Nov 01, 2023. Highest Controversy Level is as of Nov 08, 2023. Sustainalytics Subindustry: Soft Drinks. Research Methodology for Valuing Companies

Alternative location for disclosure can be found <https://pdf-stg.morningstar.com/v1/disclosure>

Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. Moreover, we think analyzing valuation through discounted cash flows presents a better lens for viewing cyclical companies, high-growth firms, businesses with finite lives (e.g., mines), or companies expected to generate negative earnings over the next few years. That said, we don't dismiss multiples altogether but rather use them as supporting cross-checks for our DCF-based fair value estimates. We also acknowledge that DCF models offer their own challenges (including a potential proliferation of estimated inputs and the possibility that the method may miss short-term market-price movements), but we believe these negatives are mitigated by deep analysis and our long-term approach.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at a discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk adjusted discount to their fair values, whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of

our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality, no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

When considering a company's moat, we also assess whether there is a substantial threat of value destruction, stemming from risks related to ESG, industry disruption, financial health, or other idiosyncratic issues. In this context, a risk is considered potentially value destructive if its occurrence would eliminate a firm's economic profit on a cumulative or mid-cycle basis. If we deem the probability of occurrence sufficiently high, we would not characterize the company as possessing an economic moat.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in

working capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes (EBI) and the net new investment (NNI) to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital (RONIC), and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until a perpetuity value is calculated. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term, market-value weights.

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating is designed to capture the range of potential outcomes for a company's intrinsic value. This rating is used to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating is aimed at identifying the confidence we should have in assigning a fair value estimate for a given stock.

Morningstar Equity Research Star Rating Methodology

Research Methodology for Valuing Companies

Our Uncertainty Rating is meant to take into account anything that can increase the potential dispersion of future outcomes for the intrinsic value of a company, and anything that can affect our ability to accurately predict these outcomes. The rating begins with a suggested rating produced by a quantitative process based on the trailing 12-month standard deviation of daily stock returns. An analyst overlay is then applied, with analysts using the suggested rating, historical rating data, and their own knowledge of the company to inform them as they make the final Uncertainty Rating decision. Ultimately, the rating decision rests with the analyst. Analysts take into account many characteristics when making their final decision, including cyclical factors, operational and financial factors such as leverage, company-specific events, ESG risks, and anything else that might increase the potential dispersion of future outcomes and our ability to estimate those outcomes.

Our recommended margin of safety—the discount to fair value demanded before we’d recommend buying or selling the stock—widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the potential dispersion of outcomes, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the Uncertainty Rating provides guidance in portfolio construction based on risk tolerance.

Our Uncertainty Ratings are: Low, Medium, High, Very High, and Extreme.

	Margin of Safety	
Qualitative Analysis	★★★★★Rating	★Rating
Uncertainty Ratings	★★★★★	★
Low	20% Discount	25% Premium
Medium	30% Discount	35% Premium
High	40% Discount	55% Premium
Very High	50% Discount	75% Premium
Extreme	75% Discount	300% Premium

Our uncertainty rating is based on the interquartile range, or the middle 50% of potential outcomes, covering the 25th percentile–75th percentile. This means that when a stock hits 5 stars, we expect there is a 75% chance that the intrinsic value of that stock lies above the current market price. Similarly, when a stock hits 1 star, we expect there is a 75% chance that the intrinsic value of that stock lies below the current market price.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed which we believe is a reliable source.

Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock’s current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open. Our analysts keep close tabs on the companies they follow, and, based on thorough and ongoing analysis, raise or lower their fair value estimates as warranted.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market’s valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. Scenario analysis developed by our analysts indicates that the current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. Scenario analysis by our analysts indicates that the market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the

Research Methodology for Valuing Companies

quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Analysts consider companies' investment strategy and valuation, balance sheet management, and dividend and share buyback policies. Corporate governance factors are only considered if they are likely to materially impact shareholder value, though either the balance sheet, investment, or shareholder distributions. Analysts assign one of three ratings: "Exemplary", "Standard", or "Poor". Analysts judge Capital Allocation from an equity holder's perspective. Ratings are determined on a forward looking and absolute basis. The Standard rating is most common as most managers will exhibit neither exceptionally strong nor poor capital allocation.

Capital Allocation (or Stewardship) analysis published prior to Dec. 9, 2020, was determined using a different process. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Capital Allocation Rating: Our Capital Allocation (or Stewardship) Rating represents our assessment of the quality of management's capital allocation, with particular emphasis on the firm's balance sheet, investments, and shareholder distributions. Beyond investment strategy, financial leverage, and dividend and share buyback policies, analysts also considered execution, compensation, related party transactions, and accounting practices in the rating.

Sustainalytics ESG Risk Rating Assessment: The ESG Risk Rating Assessment is provided by Sustainalytics; a Morningstar company.

Sustainalytics' ESG Risk Ratings measure the degree to which company's economic value at risk is driven by environment, social and governance (ESG) factors.

Sustainalytics analyzes over 1,300 data points to assess a company's exposure to and management of ESG risks. In

other words, ESG Risk Ratings measures a company's unmanaged ESG Risks represented as a quantitative score. Unmanaged Risk is measured on an open-ended scale starting at zero (no risk) with lower scores representing less unmanaged risk and, for 95% of cases, the unmanaged ESG Risk score is below 50.

Based on their quantitative scores, companies are grouped into one of five Risk Categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a 'high risk' assessment reflects a comparable degree of unmanaged ESG risk across all subindustries covered.

The ESG Risk Rating Assessment is a visual representation of Sustainalytics ESG Risk Categories on a 1 to 5 scale. Companies with Negligible Risk = 5 Globes, Low Risk = 4, Medium Risk = 3 Globes, High Risk = 2 Globes, Severe Risk = 1 Globe. For more information, please visit sustainalytics.com/esg-ratings/

Ratings should not be used as the sole basis in evaluating a company or security. Ratings involve unknown risks and uncertainties which may cause our expectations not to occur or to differ significantly from what was expected and should not be considered an offer or solicitation to buy or sell a security.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based.
