We see Gentex's gross margin remaining flat over time.

Gentex reported strong fourth-quarter 2015 results that gave us no reason to change our moat or fair value estimate. The company saw the benefit of prior price reductions from its suppliers mitigating the annual price reductions of 2%-3% that Gentex must give its customers. Gross margin increased by 180 basis points to 40.2% while operating margin of 31.2% was the firm's best since first quarter 2004. The company also beat consensus for both revenue and earnings per share with EPS growing 25% for the quarter over year to $0.30 versus consensus of $0.27. Free cash flow remains abundant at Gentex, and the firm is no longer tentative in buying back its stock sells off. A higher dividend would give shareholders--higher dividend or buying back shares more quickly after the stock could find better uses for all its cash, such as paying a narrower moat or fair value estimate.

Management also introduced 2016 guidance that included revenue of $1.64 billion-$1.72 billion and in an unusual move introduced 2017 guidance of revenue growing about 6%-10% above 2016 levels based on business already booked. As long as the macroeconomic environment holds up, which is more of a concern than last year, we are not worried about Gentex meeting its guidance as there is plenty of demand for its mirrors and the advanced features such as HomeLink that go with about half of all its interior auto-dimming mirror shipments. The company's recent launch of the full-display mirror also has excellent growth potential when it reaches meaningful volume in 2018. For now this unique product is on the Cadillac CT6 sedan, XT5 crossover, and Chevrolet Bolt electric car, but Gentex is working with three other unnamed OEMs (original equipment manufacturers) for launches over the next two years.

**Investment Thesis** 12/22/2015

Gentex creates auto-dimming rear- and side-view mirrors that use electrochromic technology. These mirrors automatically darken to eliminate headlight glare for drivers and have many other applications. With over 1,000 patents worldwide, some valid through 2039, and a dominant 89% market share, Gentex has a narrow economic moat that it should be able to protect for a long time.

The growth prospects for auto-dimming mirrors look strong. Gentex estimates that in 2014, 25% of all cars had interior auto-dimming mirrors, and 7% had at least one exterior auto-dimming mirror. Management believes that during the next 10-12 years, auto-dimming mirrors can achieve about 45% market share. This growth will come from increased vehicle penetration as more original-equipment manufacturers...
make the safety benefit of auto-dimming technology available and as Gentex’s research leads to new, advanced-feature mirrors that ultimately become standard products.

SmartBeam, which automatically turns a vehicle’s brights on or off and can also allow brights to be on continuously, is sold mostly in Europe, but its safety benefits could expand if U.S. regulators change current rules. Research has found that drivers use their brights optimally only about 25% of the time. In May 2012, Gentex announced a long-awaited lane departure system on the Ford Explorer that combines SmartBeam technology with driver assistance firm Mobileye’s lane departure technology. Active safety is a very fast-growing field, so this product may show up on other vehicle programs.

Over the long term, Gentex’s technology also could be brought to more airplane windows. The company (in conjunction with PPG Aerospace) supplies auto-dimming passenger windows for the Boeing 787, which could eventually expand to more firms. The September 2013 purchase of HomeLink from Johnson Controls is another expansion outside the mirror. In July 2014, Gentex announced that HomeLink will move into other auto applications such as linking a home to snowmobiles and farm vehicles. It also is targeting RFID parking barriers in Asia. With plenty of cash and a fortress balance sheet, Gentex has lots of room to grow.

**Economic Moat 12/22/2015**

Gentex’s cost advantage from economies of scale, its customers’ switching costs, and efficient scale give the firm a narrow moat. Patents, innovations such as SmartBeam, and a consistent world-class manufacturing process have let the firm increase its auto-dimming mirror share to 89%. We see this as representative of efficient scale because Gentex does not give any reason for a customer to try another auto-dimming mirror supplier nor leave room for many competitors. The firm’s technological leadership increases our confidence that Gentex will hold, if not keep increasing, market share. Given that the company is patient with its engineers in order to encourage innovation, we do not think Gentex will lose its competitive edge. Its research and development spending as a percentage of revenue is one of the highest in our supplier coverage. Gentex was the first to market with electrochromic automatic-dimming mirrors, so the company enjoyed pricing benefits from the early adopters of the technology. Its unique product and its ability to commercialize the technology and continually make patent-protected innovative changes to the automatic dimming mirror has enabled Gentex to generate returns on invested capital vastly superior to other auto suppliers. The company’s market share gain to 89% of auto-dimming mirrors from 85% in recent years shows the superior quality of its product and the reliability of Gentex to deliver on time, suggesting that customers would face switching costs to move over to Magna Mirrors.

However, the company is probably not a wide-moat candidate, in our opinion. Even Gentex faces customer demands for annual price reductions of about 2%-3%. Gentex’s gross margins declined to 32.6% in the recession years of 2008 and 2009, from 43.2% in 1999. Suppliers are at the mercy of the automakers’ production schedules and relentless annual demands for price concessions. Each automaker’s volume makes the supplier very dependent on this large source of revenue. Furthermore, the auto industry is so cyclical that in bad times even the best parts suppliers cannot avoid large declines in return on invested capital and profit. In Gentex’s case, ROIC was more than 40% in the late 1990s but fell to about 15% in 2009, before rebounding to as much as 25% in subsequent years. Cost-cutting helps ease the pain, but it does not restore all lost profit. We model ROIC in the low 20% range over our five-year forecast period.

**Valuation 12/22/2015**

We are maintaining our fair value estimate at $18 per share. We model revenue to increase over 8% on a five-year compound annual basis and operating margins to
average about 28.5% during our five-year explicit forecast period. We project revenue based on a global vehicle production forecast, global auto-dimming mirror penetration, Gentex’s market share, and average selling price. We assume a more rapid increase in penetration throughout our forecast period than previously modeled due to attractive growth prospects and Gentex’s history. We believe additional margin expansion will remain difficult, since automakers always seek price concessions. However, we think higher unit volume, innovation by Gentex, and HomeLink’s gross margins at nearly 60% will mitigate this risk. As an example, there is potential for SmartBeam’s dynamic forward lighting product to grow in the United States if the push by the industry to overhaul outdated headlight regulation succeeds. Another innovation is the full display mirror, starting production in 2015’s fourth quarter in the Cadillac CT6 sedan. We have driven the Cadillac CT6 and think that the full display mirror is far safer than a conventional mirror. Although major revenue growth from this mirror is not expected until 2017 or 2018, we think it has potential to be in every vehicle in the developed world due to its superior function over a normal mirror. We think the firm’s manufacturing efficiency, product expertise, and high-tech products will keep gross margins higher than in recent years but continued research and development, annual price reductions, and overhead spending will prevent major operating margin expansion. We project capital expenditures to average 7% of revenue per year and R&D expenses of about 6% of revenue on average. We model Gentex’s auto-dimming mirror market share going to 91% over our five-year explicit forecast period because we see no major threat from other firms. Gentex’s quality and reliability are very hard to beat, and customers do not source mirrors solely based on price, which reduces the threat from low-cost Asian suppliers.

**Risk** 12/22/2015

Gentex’s only large competitor is Magna Mirrors (formerly Donnelly). Magna has much deeper pockets than Gentex and could invest substantially in its auto-dimming mirror group to try to beat Gentex’s technology advantage or devote more sales resources than Gentex can afford. Also, there is always the possibility that a new and superior technology will be invented and take over the auto-dimming mirror market, but we consider this risk remote. The HomeLink acquisition could prove to not be as lucrative as management expected. Finally, it is possible that Gentex could be put out of the automotive supply chain if governments start allowing camera technology to replace all types of mirrors in a vehicle. Although we think this risk is more than a decade away from becoming a reality should it ever occur, our fair value estimate may be severely reduced if such legislation became more than a remote possibility. The company’s expertise in camera systems, however, may make this legislative risk far less problematic than Gentex’s critics fear. Furthermore, currently display-only systems require retooling of the vehicle and cost more than a mirror. Uncertainty as to image quality in poor weather or from other obstructions needs to be considered by regulators, as well. In light of this regulatory risk, the fact that Gentex’s stock price is not immune to the cycle whims of the auto industry, and more active safety content possibly being placed in the center stack, dashboard, or window, rather than the mirror, our fair value uncertainty rating is set at high.

**Management** 12/22/2015

Chairman and CEO Fred Bauer, 72, founded Gentex in 1974 and owns 2.8% of the company. Management has achieved returns on invested capital far exceeding the cost of capital for many years, which we expect to continue. The company generates so much free cash flow (typically about 10% to over 20% of sales) that until the HomeLink acquisition, it had amassed cash and an investment portfolio, mostly consisting of stocks and government bonds, amounting to more than half of assets. Rather than piling up investments, we would prefer to see an even higher dividend or more share repurchases when the stock is trading well below our fair value estimate. A share repurchase in the third quarter of 2012 was the company’s first since the fourth quarter of 2008. No shares were repurchased in 2013, but management spent $30 million on buybacks in 2014. The buyback plan does not expire and has authorization at Sept. 30 to repurchase another 6.3 million shares including the 5
million share increase announced on Oct. 21. We think management recognizes when its shares are cheap enough to buy back, but wish it would act on that knowledge sooner. The company seems to be acting faster to buyback shares in 2015 with buybacks in the first nine months of the year totaling $82.9 million, up from $10 million over the same period in 2014. Stock based compensation, however, means the share count is higher year over year in 2015 compared with 2014. We think Bauer’s capital-allocation preference is share repurchases because of his dislike of the double taxation of dividends.

Overview

Profile:

Gentex was founded in 1974 to produce smoke-detection equipment. The company sold its first glare-control interior mirror in 1982 and its first model using electrochromic technology in 1987. Automotive revenue is about 98% of total revenue, and the company is constantly developing new applications for the technology to remain on top. Sales from 2014 totaled about $1.4 billion on 29 million units shipped. The company is based in Zeeland, Michigan.
