BUSINESS: Intel Corp. is a leading manufacturer of integrated circuits. Markets served: primarily makers of personal computers; also communications, industrial automation, military, and other electronic equipment. Main products: microprocessors (notably, the Pentium series), microcontrollers, and memory chips. Also sells computer modules and boards, and network products. Foreign busi-

Intel stock has been on a roll of late, climbing nearly 15% since our July review. We attribute the stock's solid performance to better-than-expected second-quarter results and a rosy outlook moving ahead. **Management provided good news during its June-quarter conference call.** Earnings per share were \$0.55, which was sharply above our \$0.44 expectation and the prior-year result of \$0.39. The company prospered from its strategy to broaden the reach of its silicon content from data centers to PCs to the Internet of Things. It appears on track to reach its objective of 40 million tablets sold, while the ramp of its Baytrail SoC (system on a chip) is another reason for optimism. Overall, positive momentum in the PC Client Group and Data Center division helped to offset a decrease in the Communications segment. Going forward, we are increasingly optimistic regarding our view for 2014 and 2015. We now look for revenues of \$55.42 billion and \$56.8 billion for the next two years, respectively. (This is a notable increase from our \$54.12 billion and \$55.15 billion estimates at the time of our July

review.) Furthermore, we look for margins to increase moderately for both this year and 2015, which has prompted us to raise our share-net estimates to \$2.20 and \$2.30, respectively, a \$0.20 increase for each year compared to our view three months ago. **Building momentum in the lucrative mobile space is vital to long-term profit growth.** Management remains committed to boosting its presence in the mobile market through partnerships and other collaborating means. We view this as a key earnings driver over the longer term, as the personal computer market, though currently rebounding from its recent nadir, will likely remain a mature market going forward. **These timely shares are worthy of consideration for conservative investors seeking a technology presence.** Despite the aforementioned price increase, INTC stock still has worthwhile long-term risk-adjusted total return potential. The solid dividend yield, which is not commonplace in the semiconductor industry, adds to its appeal.
